

LAB # 4

Start, Sleep and Stop methods of multithreading

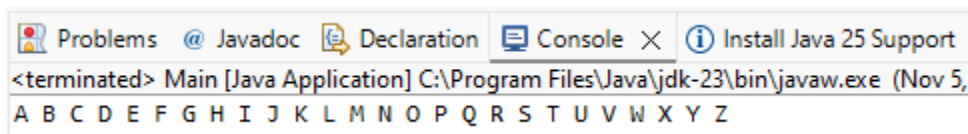

OBJECTIVE:

Understanding concurrency by implementing start, sleep and stop thread functions.

Task :

```
1 package Lab;
2 class AlphabetThread extends Thread {
3     public void run() {
4         for (int i = 0; i < 26; i++) {
5             char letter = (char) ('A' + i);
6             System.out.print(letter + " ");
7             try {
8                 Thread.sleep((int)(Math.random() * 500 + 100));
9             } catch (InterruptedException e) {
10                 System.out.println("Thread interrupted");
11             }
12         }
13     }
14 }
15
16 public class Main {
17     public static void main(String[] args) {
18         AlphabetThread t = new AlphabetThread();
19         t.start();
20     }
21 }
--
```

Output:

```
<terminated> Main [Java Application] C:\Program Files\Java\jdk-23\bin\javaw.exe (Nov 5, 2023)
